

CJ2 FAMILY

New PLCs with a proven track record

» Flexibility in communication

» Faster machine development

» Innovation through evolution

Innovation without growing pains

As a modern machine manufacturer you need to continuously increase the intelligence and flexibility of your product to remain competitive. But you also need to be absolutely certain that it all works perfectly, first time, every time.

The CJ2 is the result of years of experience as market leader in the field of modular controllers and represents a logical next step in controller design. It offers greater performance and faster I/O response as well as extreme scalability - so you will only need one family. In addition, programming, debugging and networking are faster and easier. Welcome to the new CJ2 Family: built to give you innovation without growing pains.

Although CJ2 can directly replace any CJ1 CPU, it offers the following additional significant advantages:

Open to the world

Data communication is via standard Ethernet port with EtherNet/IP Data Link function.

Always accessible

The standard USB and Ethernet ports give you instant access for programming, commissioning, maintenance and troubleshooting.

Learn one, know them all

Thanks to the wide variety of CPUs with consistent architecture across all PLC families, you only need to learn one, and you will know them all.

Highly flexible

Adapt the PLC to your needs with the wide variety of compatible CJ1 Family I/O units (nearly 100).

The wide range of CPUs means you need only to get familiar with one PLC family for use in everything from simple stand-alone applications up to networked, high-speed machines.

Inspired by proven technology

Proven track record

The CJ2 Family is based on the highly popular CJ1, which after its launch in 2001 now operates in an extraordinary variety of applications all over the world. Now, as the natural successor, the CJ2 combines that field-proven technology with a wider choice of CPUs, more speed and memory, and a wider variety of communication interfaces.

Faster development

Tag-based communications technology will simplify the interfacing of the PLC to the outside world. On-line debugging improvements also help to accelerate software development so you can change the code and test the results quickly. The added function block memory will allow you to improve program structure and reuse code even in the entry-level models.

Talks to all

The CJ2 Family supports major open networking technologies including:

- Ethernet-based communication based on open industrial standards
- Serial communications over RS-232 C, RS-422, RS-485 and USB
- The major open Fieldbus standards
- Fast and accurate motion control networks.

EtherCAT

MODBUS

MECHATROLINK-II

CAN

Built to answer your needs

Omron has used its long experience as a specialist machine automation supplier to develop CJ2. The result is an extremely reliable PLC that is also a powerful example of our commitment to continuous improvement. The CJ2 Family is a major opportunity to innovate and simultaneously reduce costs: now and in the future, because we are continuously improving its functionality. What's more, moving up from other Omron PLCs to CJ2 couldn't be easier: no learning curves, no re-tooling and no unnecessary reprogramming. It's the obvious choice for modern machine builders.

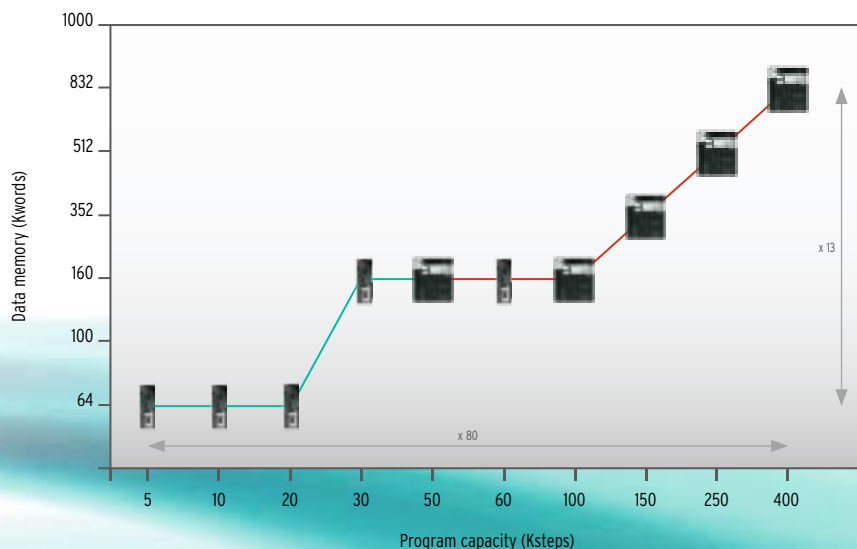

Power supply

Pulse I/O

CPUs

Wide range CPU capacity

To stay ahead in the machine-building business, you need to grow with your end-users' needs. Faster production, better quality control and better traceability require more speed and more memory. That's why the CJ2 Family offers a wide range of CPUs to suit any task. From 5 Ksteps program capacity and 64 Kwords memory, right up to 400 Ksteps capacity and 832 Kwords.

Higher precision

In addition to the greater CPU processing performance, Omron has also added new high-speed I/O units, such as analog input units with 20µs conversion time, while new PLC instructions provide immediate access to fast I/O data. The result is even more real-time reliability.

Select what you need

With CJ2 you can also still connect to the existing CJ1 I/O units. You can thus benefit from CJ2's improvements without redesigning the entire system.

Easy connection by USB

Simply connect the cable, with no settings required

A CJ2 CPU Unit on an EtherNet/IP network can be accessed via USB, with no need for routing tables

CX-One (e.g., CX-Programmer)

One family - two performance classes

CJ2M for basic machine automation

The CJ2M Series is ideal for packaging and general machine automation needs. Connectivity is assured thanks to the built-in USB port and the choice of Ethernet and RS-232C/422/485 interfaces on the CPU.

- Always accessible through standard USB port
- Standard Ethernet port with EtherNet/IP Data Link function
- Wide range of program capacities, from 5 Ksteps to 60 Ksteps
- Pulse I/O add-on modules have a special connection to the CPU and are controlled by convenient positioning instructions
- Serial option board for CJ2M-CPU3*
- Dedicated function block memory ensures efficient execution of function block software modules

Pulse I/O modules

By mounting optional pulse I/O modules, you can extend the functionality of any CJ2M CPU with:

- interrupt inputs
- high-speed counters
- incremental encoder inputs
- pulse frequency control outputs
- pulse width control outputs.

Up to two modules can be mounted per CPU, allowing direct control of four motion axes. Using dedicated instructions, these axes can be controlled directly by the PLC program, without communication delays.

CJ2H for high speed, high capacity

The CJ2H Series is ideal for advanced machine automation needs, such as those required in image processing inspection of electrical components and high speed sorting on conveyors.

Fast and accurate control

CJ2H has special instructions that provide direct data access to high-speed analog I/O units and serial communication units. Position Control units can be synchronised for coordinated control of up to 20 axes.

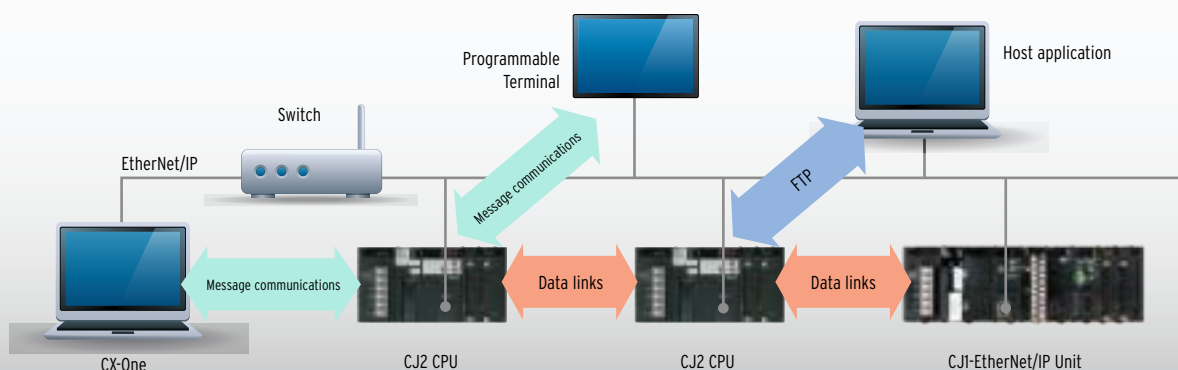

- Always accessible through standard USB port
- Standard Ethernet port with EtherNet/IP Data Link function
- High program capacity of up to 400K Steps
- Higher precision for machine operation and processing quality
- Immediate refreshing of basic I/O ensures real-time processing
- Faster response means higher precision and better quality
- High data memory capacity of up to 832 Kwords

Multi-functional Ethernet Port

CJ2's built-in Ethernet port supports the EtherNet/IP protocol for fast tag-based data links. Using symbolic names to define data links will help to reduce errors in modular system design.

Of course you can also use the same Ethernet port with programming, monitoring, file transfers or message communications through standard IT protocols.

*1 The following times are added if EtherNet/IP data tag links are used for the CJ2H-CPU6_-EIP.

Normal operation: 100 μs + Number of transfer words × 0.33 μs

High-speed interrupt function enabled: 100 μs + Number of transfer words × 0.87 μs

The following time must be added when using EtherNet/IP tag data links for the CJ2M-CPU3_.

100 μs + (Number of words transferred × 1.8 μs)

*2 This applies when high-speed interrupts are used.

*3 A960 to A1471 and A10000 to A11535 cannot be accessed by CPU Bus Units, Special I/O Units, PTs, and Support Software that do not specifically support the CJ2 CPU Units.

*4 Bits in the EM Area can be addressed either by bit or by word. These bits cannot be addressed by CPU Bus Units, Special I/O Units, PTs, and Support Software that do not specifically support the CJ2 CPU Units.

*5 EM banks D to 18 cannot be accessed by CPU Bus Units, Special I/O Units, PTs, and Support Software that do not specifically support the CJ2 CPU Units.

*6 With CJ2H CPU Units with unit version 1.2 or later, force-setting/resetting bits in the EM Area is possible either for banks that have been specified for automatic address allocation or for banks specified for the EM Area force-set/reset function. With CJ2M CPU Units, force-setting/resetting bits in the EM Area is possible only for banks specified for the EM Area force-set/reset function.

*7 This data type cannot be used in Function blocks.

*8 This data type can be used only in Function blocks.

*9 Supported only when CX-Programmer version 9.0 or higher is used.

*10 Supported only by the CJ2H-CPU6_-EIP and CJ2M-CPU3_.

Fast and powerful CPUs for any task

The comprehensive lineup of new CJ2 processors offer outstanding new features while evolving from the CJ1 series and its proven track record. The wide range of high performance CPU's allow scalability and flexibility for any automation challenge. The new CJ2 CPU units offer increased capacity plus built-in USB and ethernet ports, yet are fully compatible with the extensive range of CJ1 I/O units.

Both CJ2H and CJ2M platforms are designed for a wide variety of control solutions. The CJ2H is ideal for advanced machine control while the CJ2M is the perfect fit for general machine applications.

Improvements such as structures and arrays, tag based programming, and increased memory capacity ensure fast development and less cost for the user. The new CJ2M features communication plug-in modules, more function block memory, and new high speed I/O units while the CJ2H CPU's increased program memory area, synchronous unit operation, and fast processors ensure your machine will perform at a level higher than the competition.

Power and flexibility

CJ systems can operate on 24 VDC power supply, or on 100 to 240 VAC mains. For small-scale systems with mainly digital I/O a low-cost small-capacity power supply can be used. For systems with many analogue I/Os and control/communication units, it may be necessary to use a larger power supply unit.

Depending on the CPU type, up to 3 expansions can be connected to the CPU 'rack', giving a total capacity of 40 I/O units. The total length of the expansion cables of one system may be up to 12 m.

Ordering information

Power supply

Input range	Power consumption	Output capacity at 5 VDC	Output capacity at 24 VDC	Max. output power	Features	Width	Order code
21.6 to 26.4 VDC	35 W max.	2.0 A	0.4 A	16.6 W	–	27 mm	CJ1W-PD022
19.2 to 28.8 VDC	50 W max.	5.0 A	0.8 A	25 W	–	60 mm	CJ1W-PD025
85 to 264 VAC 47 to 63 Hz	50 VA max.	2.8 A	0.4 A	14 W	–	45 mm	CJ1W-PA202
	100 VA max.	5.0 A	0.8 A	25 W	Run output (SPST relay) Maintenance status display	80 mm	CJ1W-PA205R CJ1W-PA205C

Note: The CJ1W-PD022 has no galvanic isolation

I/O expansion

Type	Description	Width, Length	Order code
I/O control unit	Required unit on CPU 'rack' to connect I/O expansions	20 mm	CJ1W-IC101
I/O interface unit	Start unit for each I/O expansion 'rack'. Requires a power supply unit.	31 mm	CJ1W-II101
I/O expansion cable	Connects CJ1W-IC101 or -II101 to the next expansion rack's -II101	0.3 m	CS1W-CN313

8 to 64 points per unit – input, output or mixed

Digital I/O units serve as the PLC's interface to achieve fast, reliable sequence control. A full range of units, from high-speed DC inputs to relay outputs, let you adapt CJ1 to your needs.

CJ1 units are available with various I/O densities and connection technologies. Up to 16 I/O points can be wired to units with detachable M3 screw terminals or screwless clamp terminals. High-density 32- and 64- point I/O units are equipped with standard 40-pin flat cable-connectors. Prefabricated cables and wiring terminals are available for easy interfacing to high-density I/O units.

From basic analogue I/O to advanced temperature control

The CJ-series offers a wide choice of analogue input units, fit for any application, from low-speed, multi-channel temperature measurement to high-speed, high-accuracy data acquisition. Analogue outputs can be used for accurate control or external indication.

Advanced units with built-in scaling, filtering and alarm functions reduce the need for complex PLC programming. High-accuracy process I/O units support an extensive range of sensors, for fast and accurate data acquisition. Temperature control units relieve the PLC CPU of PID calculations and alarm monitoring. These functions are handled autonomously by the unit, offering control performance and autotuning functions similar to stand-alone temperature controllers.

Add motion control to any CJ-Series PLC

From simple position measurement to multi-axis synchronised motion control, the CJ-Series offers a full range of units:

- Counter units gather position information from SSI- or incremental encoders. Actual positions are compared with internally stored target values.
- Position Control units are used for point-to-point positioning with servo drives or stepper motors. Target data and acceleration/deceleration curves can be adjusted on-the-fly.
- Position- and Motion Control units equipped with MECHATROLINK-II interface can control multiple drives through a single high-speed link. Message routing through multiple communication layers allows the attached drives to be configured from any point in the control network.

Open to any communication

The CJ-Series offers both standardised open networks interfaces, and cost-efficient high-speed proprietary network links. Datalinks between PLCs, or to higher-level information systems can be made using serial or Ethernet links, or the easy-to-use controller link network.

Omron supports the 2 major field networks, DeviceNet and PROFIBUS-DP. For high-speed field I/O, Omron's own CompoBus/S offers an unsurpassed ease of installation. Fully user-configurable serial and CAN-based communication can be used to emulate a variety of application-specific protocols. EtherNet/IP units provide data link functions to share large amounts of data between PLCs. The new PROFINET-IO controller together with the SmartSlice modular I/O system offers ethernet-based I/O with controller- and network redundancy.

Serial	1 x RS-232C + 1 x RS-422/RS-485	High-speed	CompoWay/F, Host link, NT link, Modbus, User-defined	CPU bus unit	31 mm	9-pin D-Sub	CJ1W-SCU42
Ethernet	1 x 100 Base-Tx		UDP, TCP/IP, FTP server,SMTP (e-mail), SNMP (time adjust), FINS routing, socket service	CPU bus unit	31 mm	RJ45	CJ1W-ETN21
EtherNet/IP	1 x 100 Base-Tx		EtherNet/IP, UDP, TCP/IP, FTP server, SNMP, SNMP	CPU Bus unit	31 mm	RJ45	CJ1W-EIP21
Controller link	2-wire twisted pair		Omron proprietary	CPU bus unit	31 mm	2-wire screw + GND	CJ1W-CLK21-V1
DeviceNet	1 x CAN		DeviceNet	CPU bus unit	31 mm	5-p detachable	CJ1W-DRM21
PROFIBUS-DP	1 x RS-485 (Master)		DP, DPV1	CPU bus unit	31 mm	9-pin D-Sub	CJ1W-PRM21
PROFIBUS-DP	1 x RS-485 (Slave)		DP	Special I/O unit	31 mm	9-pin D-Sub	CJ1W-PRT21
PROFINET-IO	1 x 100 Base-Tx		PROFINET-IO Controller, FINS/UDP	CPU Bus unit	31 mm	RJ45	CJ1W-PNT21
CAN	1 x CAN		User-defined, supports 11-bit and 29-bit identifiers	CPU bus unit	31 mm	5-p detachable	CJ1W-CORT21
CompoNet	4-wire, data + power to slaves (Master)		CompoNet (CIP-based)	Special I/O unit	31 mm	4-p detachable IDC or screw	CJ1W-CRM21
CompoBus/S	2-wire (Master)		Omron proprietary	Special I/O unit	20 mm	2-wire screw + 2-wire power	CJ1W-SRM21

Accessories

Description	Connection type	Order code
RS-232C to RS-422/RS-485 signal converter. Mounts directly on serial port.	9-pin D-sub to screw clamp terminals	CJ1W-CIF11
Controller link PCI board with support software	PCI, wired CLK	3G8F7-CLK21-EV1
Controller link repeater unit (wire to wire)	Screw - Screw	CS1W-RPT01
Controller link repeater unit (wire to HPCF fibre)	Screw - HPCF connector	CS1W-RPT02
Controller link repeater unit (wire to graded-index glass fibre)	Screw - ST connector	CS1W-RPT03

More Omron representatives

www.omron-industrial.com

Authorised Distributor:

Control Systems

• Programmable Logic Controllers • Human-machine interfaces • Remote I/O

Motion & Drives

• Motion controllers • Servo systems • Inverters

Control Components

• Temperature controllers • Power supplies • Timers • Counters • Programmable relays
• Digital panel indicators • Electromechanical relays • Monitoring products • Solid-state relays
• Limit switches • Pushbutton switches • Low voltage switch gear

Sensing & Safety

• Photoelectric sensors • Inductive sensors • Capacitive & pressure sensors • Cable connectors
• Displacement & width-measuring sensors • Vision systems • Safety networks • Safety sensors
• Safety units/relay units • Safety door/guard lock switches
