1. **Prerequisite for this guide**

The following guide will assist you to setup a remote and online connection to the equipment placed on the customer site using your proprietary vendor specific software installed on you PC. A prerequisite for this guide is:

1. You have an operational LinkManager installed on your PC and you are able to see the vendor specific equipment.
2. You have the proprietary vendor specific software installed on your PC.
3. You have the Omron device agent installed and configured on the SiteManager at the remote site.

If this is not the case, we kindly ask you to contact the person / department responsible within your own company or at the company responsible hereof.

**System overview**

The Remote Device Management system is a complete end-to-end solution for easy and secure remote access, monitoring and management of industrial equipment for the automation- and machine builder industry.

The Remote Device Management solution enables machine builders, service providers and end-users to instantly access, monitor, and manage machines and equipment remotely and effectively over secure high speed internet connections.

The following system overview is with a SiteManager 3034 or 3134 at the customer location:

![Figure 1 - System overview](image-url)
2. Logon the LinkManager

This describes how to logon your LinkManager software. If you are already logged on, please go to number 3.

1. Start the LinkManager from the START > Programs > Secomea LinkManager.
2. Select Console menu from the LinkManager Tray Icon menu.
3. Login uses the GateManager certificate and password which is obtained from your GateManager administrator. Then please click Login.

![Image of LinkManager login screen](image)

**Figure 2** LinkManager login Screen

3. Click and Choose in the LinkManager

This describes how to click and choose the device you wish to get online with. If you are already online, please go to number 4.

4. Click `<Connect all>` to connect to all devices or click a specific device to connect to only this single device:

![Image of LinkManager device selection screen](image)

**Figure 3** LinkManager Screen (example) Access to all devices or to a single device
4. **Configuration of Omron HMI**

This describes how to configure the Omron HMI through the web interface, in case this is not already done. If you are already online with your CX-Designer, please go to number 5.

1. If it is possible to access the HMI web interface directly, please go to list number 5, figure 8.

![Figure 4 LinkManager Screen](image)

2. Click `< Connect the specific Omron HMI >`

![Figure 5 LinkManager Screen](image)

3. Click on the `< icon >` shown in figure 5 to access the Omron HMI interface.

![Figure 6 HMI web Interface Screen](image)
4. Log-on / start the Omron HMI web interface
5. Select >> Operation <<

![Figure 7 HMI Web Interface Screen](image)

6. Click >> system menu <<

![Figure 8 HMI Web Interface Screen](image)

7. Select >> Comm. <<
8. Remember the field >> Node Add. = 2 << if the Omron HMI as the IP address X.X.X.2
9. Remember that the field >> Network Add = 1 must match the routing table in the PLC
10. Click Ethernet -> Enable and Click >> Show Table <<

11. Type in the IP address of the SiteManager DEV1 interface
12. In the guide we are using IP address 192.168.1.101
13. Click >> Back <<
14. Click >> Write <<
15. The HMI save the changes
5. **Online with Omron HMI and CX-Designer**

![Figure 10 CX-Designer Screen](image)

1. Start CX-One
2. Start CX-Designer.
   
The HMI require that the CX-Designer is installed on the host parallel with the LinkManager.
3. Click >> PT <<, >> Transfer << and >> Transfer Setting <<

![Figure 11 CX-Designer Communication Method Screen](image)

4. Choose “Ethernet” for direct data transfer to NS/Computer
5. Click >> Set…(S) << for settings
6. FINS Source Address – Network. Must be the same as the “Network Add” used in the HMI – See figure 13

7. FINS Destination Address – Network. Must be the same as the “Network Add” used in the HMI – See figure 13

8. FINS Destination Address – Node. Must be the same as the “Node Add.” used in the HMI – See figure 13

9. Click >> OK <<
10. Click >>Driver<<
11. Uncheck "Auto-detect"
12. Specify “workstation Node Number” to 101 – same as the last number in the IP address of the SiteManager DEV1 interface. In the guide we are using IP address 192.168.1.101
13. Specify the Target HMI IP address - In the guide we are using IP address 192.168.1.2
14. Click OK

15. Click >> PT <<, >> Transfer [From PT] <<
16. Click >> Yes << to start transferring

17. You are now transferring from the HMI to your remote PC with CX-Designer.
